TasteMatch Trips

A fairness-aware group-travel agent on Qloo Taste AI

Live demo: https://tastematch-trips.vercel.app (no login)
Code: https://github.com/heavycastles/tastematch-trips (MIT)

Agents, but with taste — and fairness.

Problem

Group trips fail on **taste**, not calendars.

- One friend: Spirited Away & Patagonia
- Another: Daft Punk & Wes Anderson
- Third: Anthony Bourdain & Chef's Table

Planners optimise for the **average** → someone quietly loses.
An LLM can *say* "something for everyone" — it can't **measure** it.

Solution: fairness as a number Qloo can measure

1. **Resolve** each favourite — `GET /search`
2. **Score cities** for the group, then for **each traveler** — `/v2/insights` + `filter.entities`
3. **Rank by fairness** — `40% mean + 40% least-happy + 20% group`
4. **Find stops** per traveler — place insights + `filter.location.query`
   (hotels, errands, offices and >100 km outliers filtered out)
5. **Score every stop for every traveler** — a traveler × stop affinity matrix
6. **Plan → self-check → re-plan** — whole-trip enjoyment gap must be ≤ 5 pts

What the agent decides (and shows)

- **Compensate:** the traveler the city fits least picks first
- **Group-aware picks:** among your top-tier stops, take the one that lifts whoever is furthest behind
- **Self-check:** if the enjoyment gap is > 5 pts, re-plan once and keep it only if it's fairer
- **Time of day:** cafés, sights and beaches by day; dinner, bars and clubs in the evening — never a club at 9 am
- **Honest:** unknown favourites are listed, a city Qloo can't score says "not scored by Qloo", never a fake 0

Live result — hosted demo, re-checked 25 Oct 2026

Sample group Aziz / Malika / Rustam · all 6 favourites matched · 16 Qloo calls in ~4 s

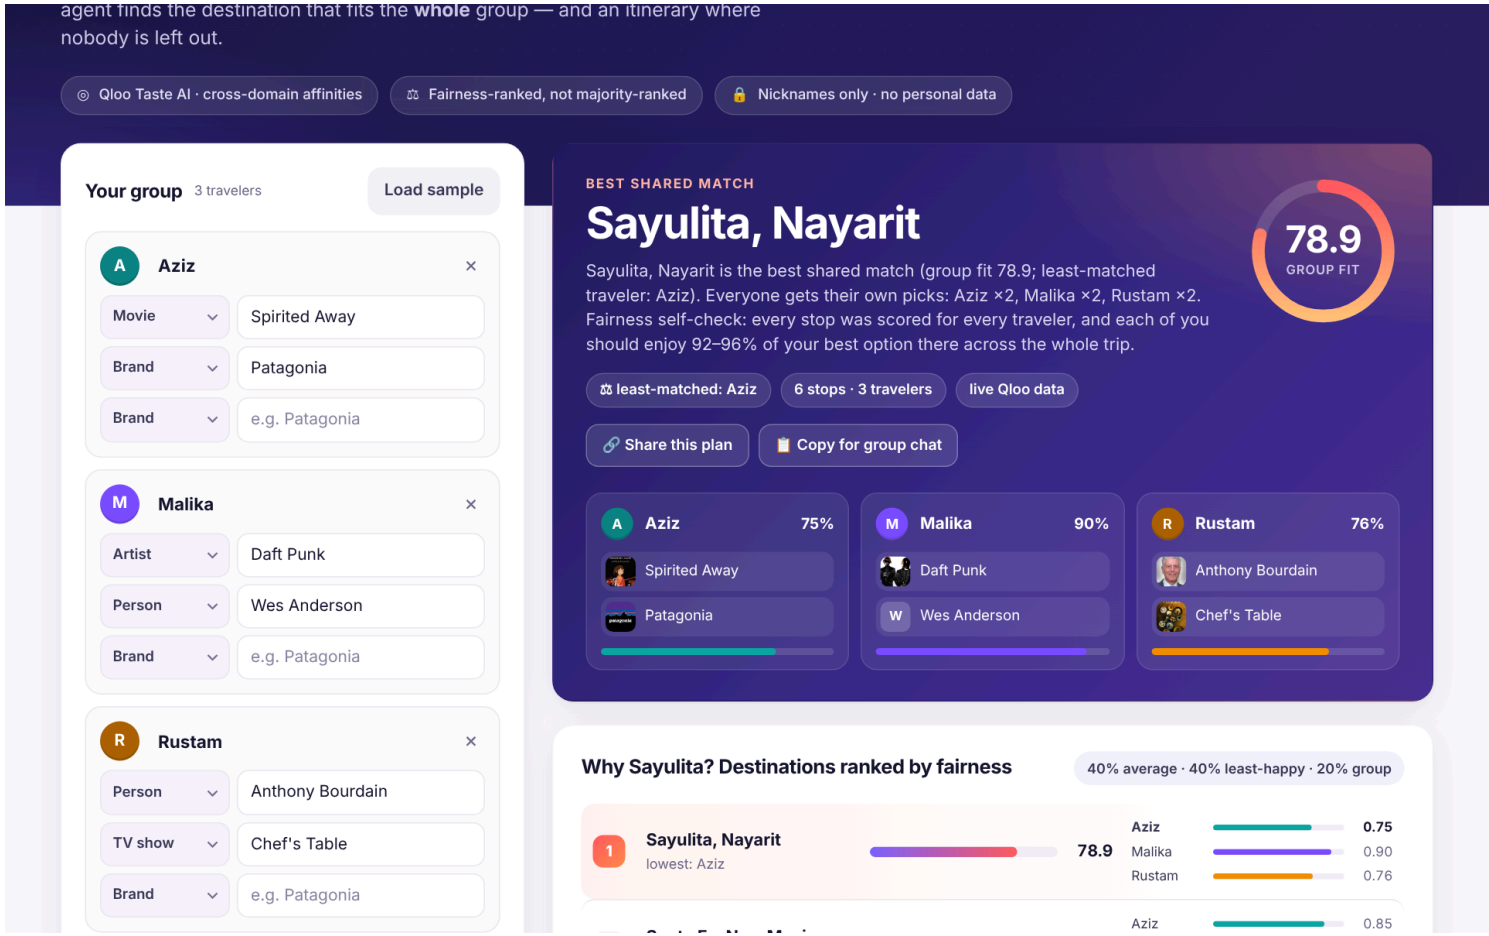

Rank	Destination	group_fit	least-matched
1	**Sayulita, Nayarit**	**78.9**	Aziz
2	Santa Fe, New Mexico	78.6	Malika
3	Ojai, California	77.4	Malika

Itinerary Aziz ×2 · Malika ×2 · Rustam ×2 — whole-trip enjoyment **92% · 93% · 96%** (gap 4 pts, 3 stops swapped)

Best shared match

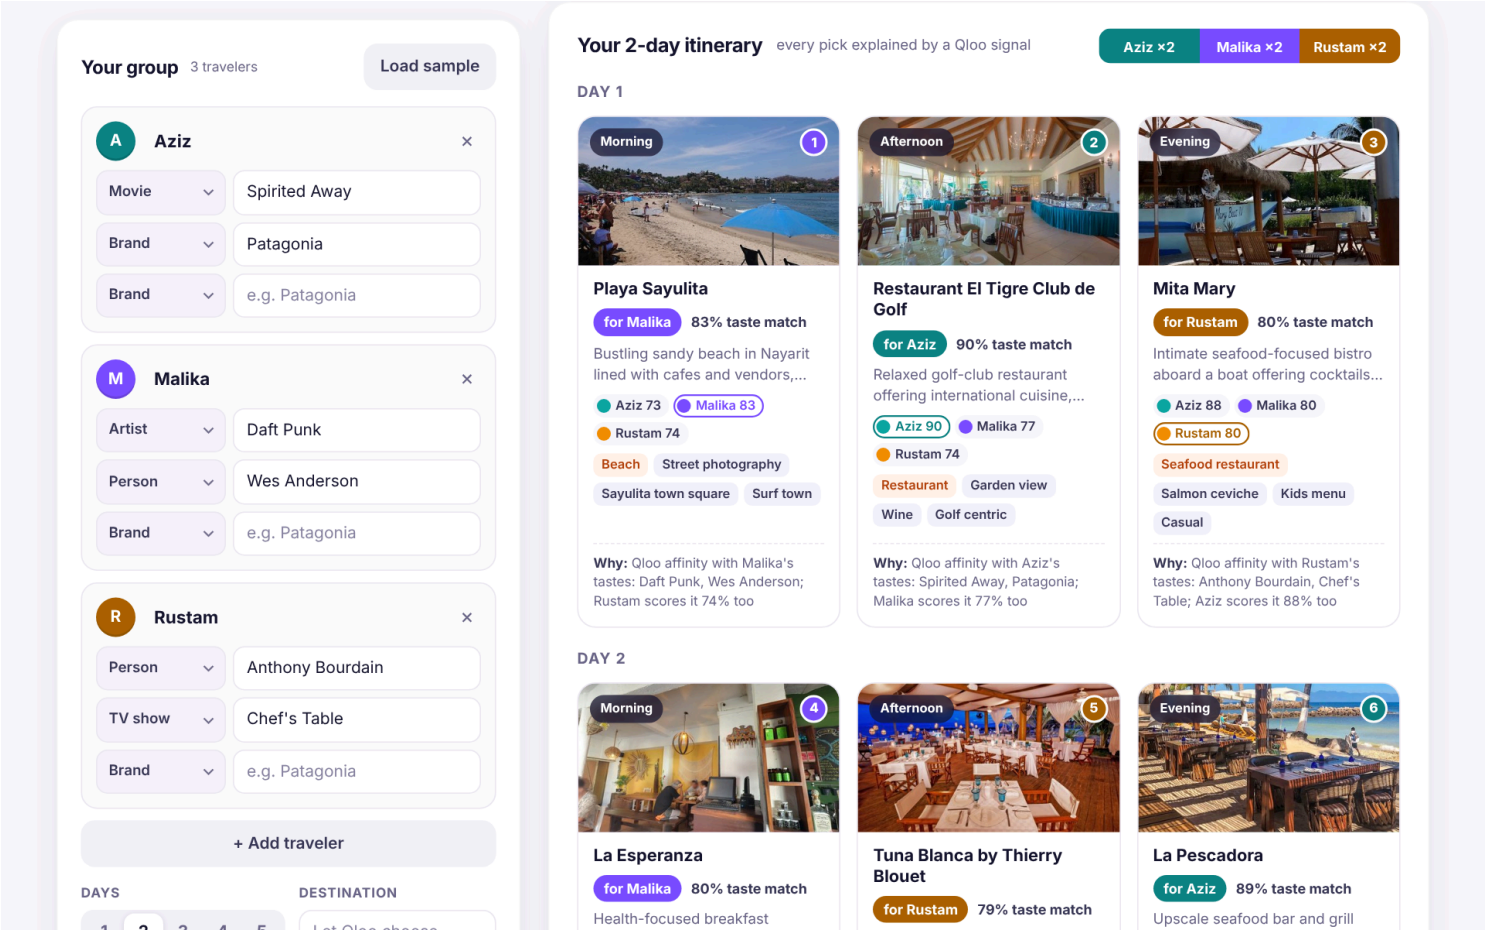

Group-fit ring, per-traveler fit, matched favourites with Qloo images.

Share this plan link + **Copy for group chat**.

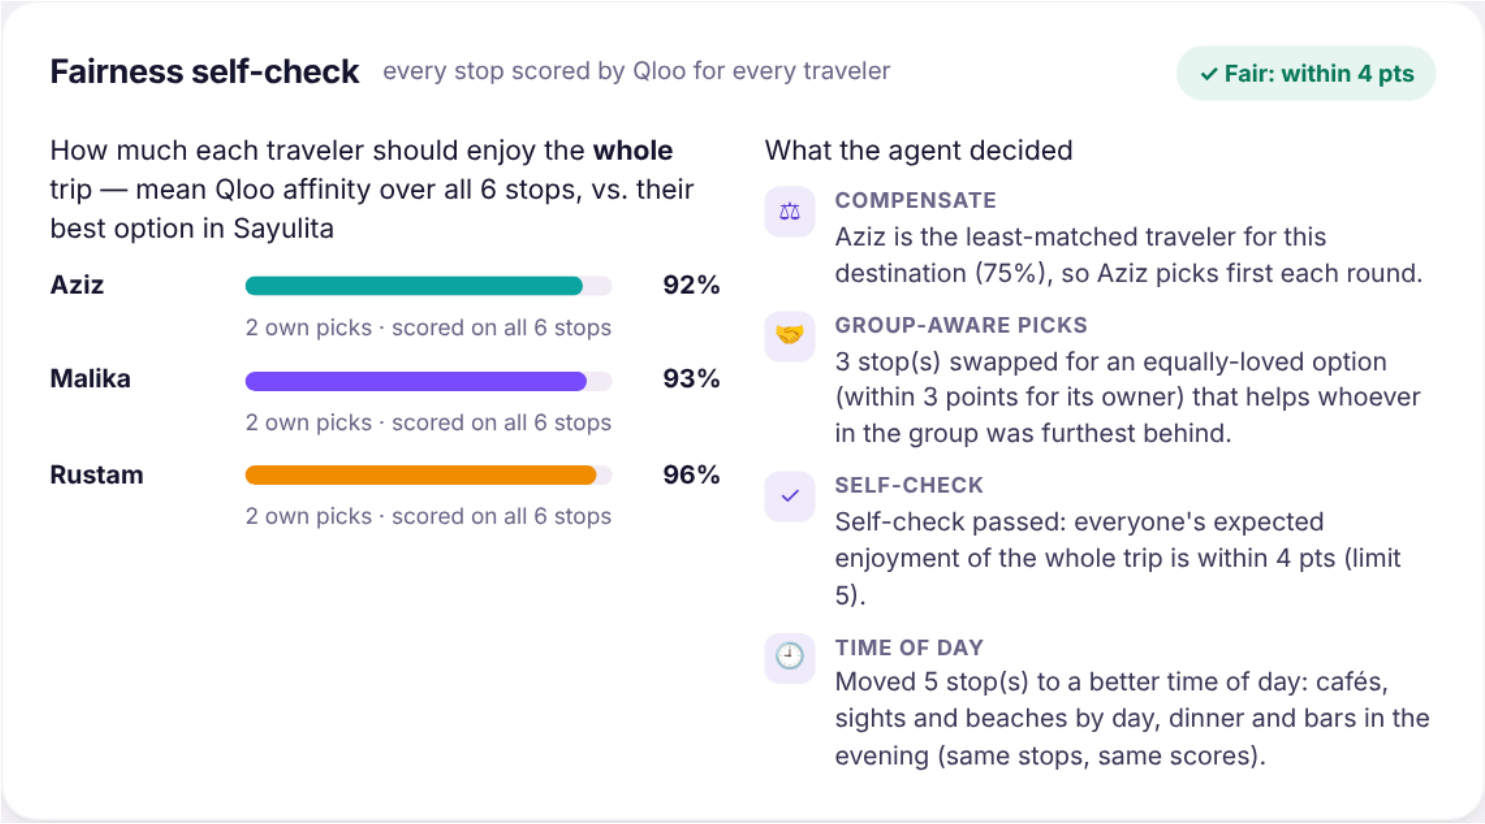

Every stop, scored for everyone

Each card: who it's for, their Qloo affinity, the favourites behind it, and how much every other traveler will enjoy it.

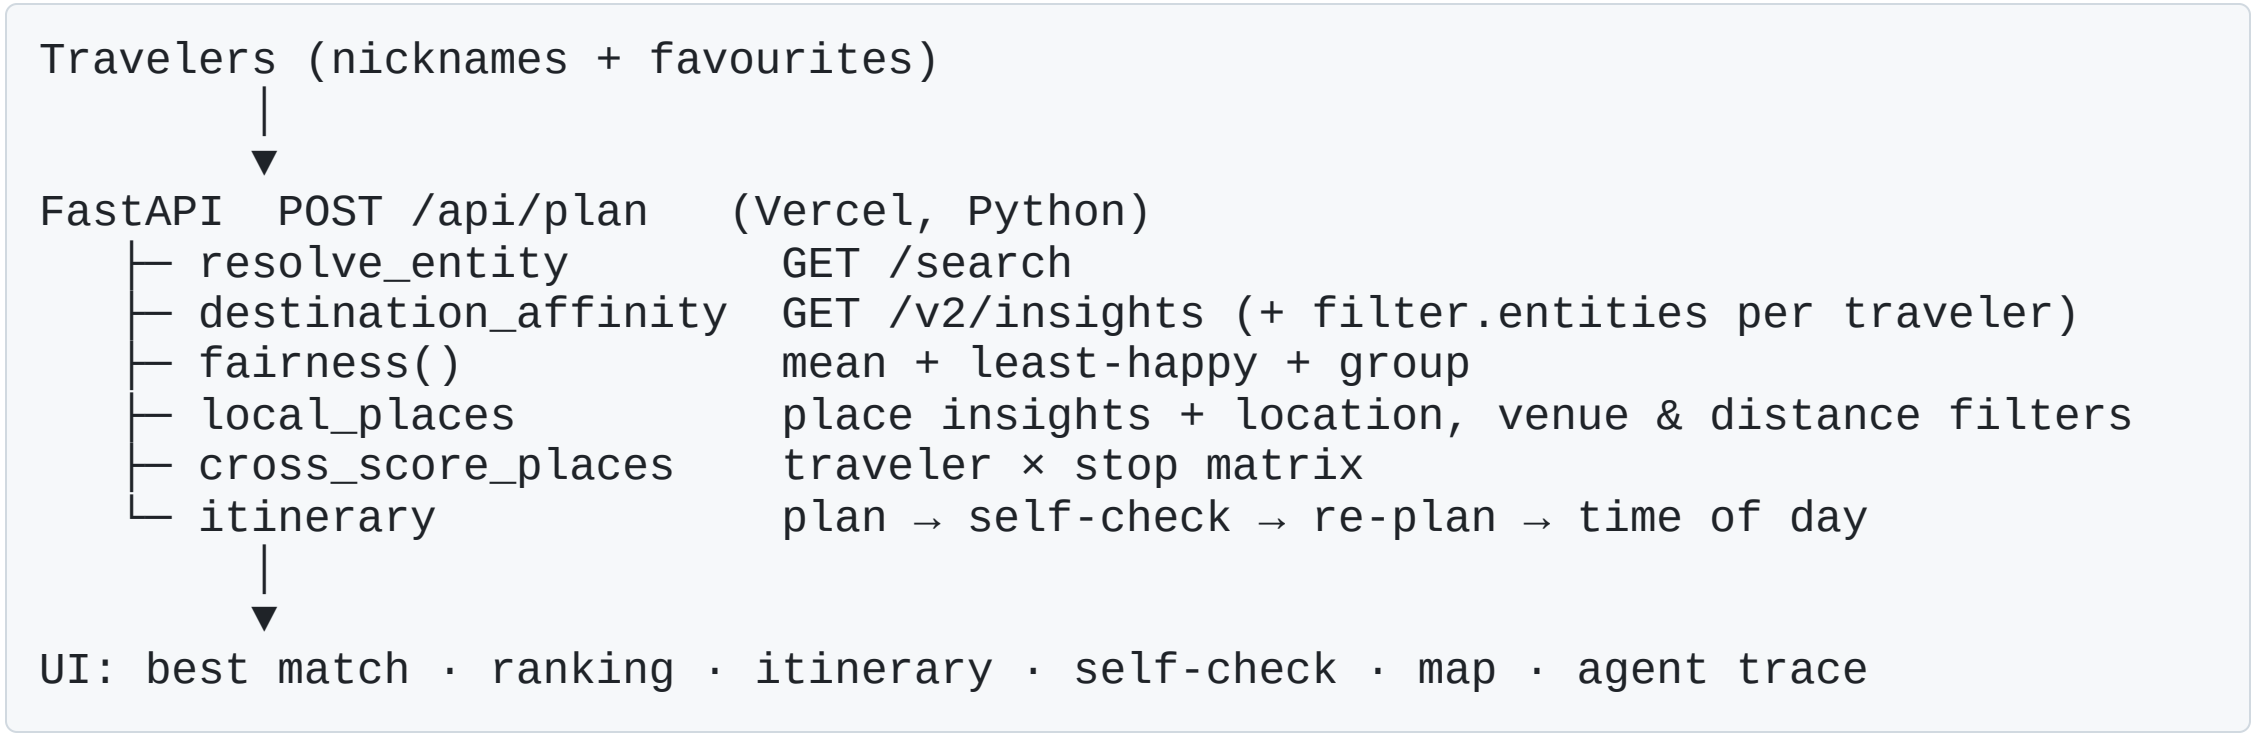

Fairness self-check

Whole-trip enjoyment per traveler and every decision the agent made — in plain language.

Architecture

Responsible use of Qloo

- **Nicknames only** — no personal data sent to Qloo
- Unmatched favourites are **surfaced**, never guessed
- Responses cached **in memory only**, never stored
- Results labelled as **aggregate affinities**, not predictions about individuals
- The agent trace shows every Qloo call, with count and time

What's next

1. `/v2/tags` vibe filters (beach / food / nightlife)
2. Budget and travel time alongside fairness
3. Group polls in Telegram (n8n workflow in the repo) to confirm the city
4. Local guides for Samarkand and Tashkent

Built with: Python · FastAPI · Qloo Taste AI (`/search` , `/v2/insights`) · Vercel · pytest (108 tests) · n8n
