TasteMatch Trips

A fairness-aware group-travel agent on Qloo Taste AI

heavycastles · `github.com/heavycastles` · Qloo Agentic Hackathon

Agents, but with taste — and fairness.

Problem

Group trips fail on **taste**, not calendars.

- One friend: anime museums
- Another: techno & design
- Third: street food & Chef's Table

Classic planners optimise for the **average** → someone quietly loses.

> We need a city where nobody is left out.

Solution

Each traveler names 2–3 **cultural favourites** (nicknames only).

1. **Resolve** favourites via Qloo `/search`
2. **Score** destinations (group + per traveler)
3. **Rank** by fairness: `40% mean + 40% min + 20% group`
4. **Places** via `/v2/insights` + location
5. **Itinerary** round-robin with provenance

```
likes → search → insights → fairness → places → fair itinerary
```

Live result (13 Oct 2026)

Hackathon API · sample Aziz / Malika / Rustam · all 6 entities matched

Rank	Destination	group_fit	least-matched
1	**Sayulita, Nayarit**	**78.9**	Aziz
2	Santa Fe, New Mexico	78.6	Malika
3	Ojai, California	77.4	Malika

Fair share itinerary: **Aziz ×2, Malika ×2, Rustam ×2**

Architecture

Responsible use of Qloo

- **Nicknames only** — no personal data to Qloo
- Unmatched likes are **surfaced**, never guessed
- Cache is **in-memory only** (never in the repo)
- Results labelled as **aggregate affinities**
- Trace shows every API call for auditability

What's next

1. `/v2/tags` vibe filters (beach / food / nightlife)
2. Budget & travel-time alongside fairness
3. Telegram group polls to confirm the city
4. Samarkand / Tashkent local guides
5. Public demo deploy (key as secret)
